PRE-PRODUCTION MARKET VALIDATION FOR FASHION

Ask the market before you make the bag.

Sartoria turns a designer's sketch into on-brand photos, video and a pre-order page, runs a 10-day social test, and tells you how many units to produce. No physical sample.

THE PROBLEM

Fashion bets six months of cash on a guess.

A maison learns whether a bag sells only after it has made it. Three rounds of physical samples, a photo shoot, a first production order. If it flops, it ends up on sale. If it sells out, there is no stock left to sell.

Physical samples, 3 rounds	26 weeks
Samples and photo shoot	€7,850
First production order	€156,000
Spent before a customer sees it	**€163,850**

Production quantity is decided without knowing what the customer wants.

HOW IT WORKS · ONE PRODUCT, END TO END

The Cognac Cabas, from sketch to GO.

A structured leather tote for a Milanese maison. Every image below was generated on the platform from one sketch.

01 · Brand

The brand book sets the boundaries.

The house uploads its **corporate identity document**: brand book, guidelines, manifesto, even as a PDF or a scan. **Evolus AI** reads and summarises it, and Sartoria turns it into the brand's characteristics.

Every product after that is written inside them: the house's materials and colours, and never what the brand rules out.

PALETTE

Cognac #9A5B2E

Ebano #2B1D14

Avorio #EFE7DA

Salvia #8A9A82

SIGNATURES

- Flat rolled handles in a single arch
- Central vertical seam
- Hidden magnetic closure

NEVER

- × Visible external logos
- × Polished gold or chrome
- × Quilting, studs, chains

Read by Evolus AI from the Aurenzi Milano brand book.

02 · DNA

The sketch becomes a product of the brand.

The designer uploads a sketch and two lines of brief. Sartoria reads the constraints and locks them into the product's **DNA**, its identity card that every later image must respect.

Images are drawn by **Qwen Image 2.1** with a **brand LoRA** trained on the maison's leathers, stitching and finishes. Open weights, so it runs on our own GPUs and the brand's unreleased designs stay private.

Qwen Image 2.1 | Brand LoRA | Self-hosted GPU

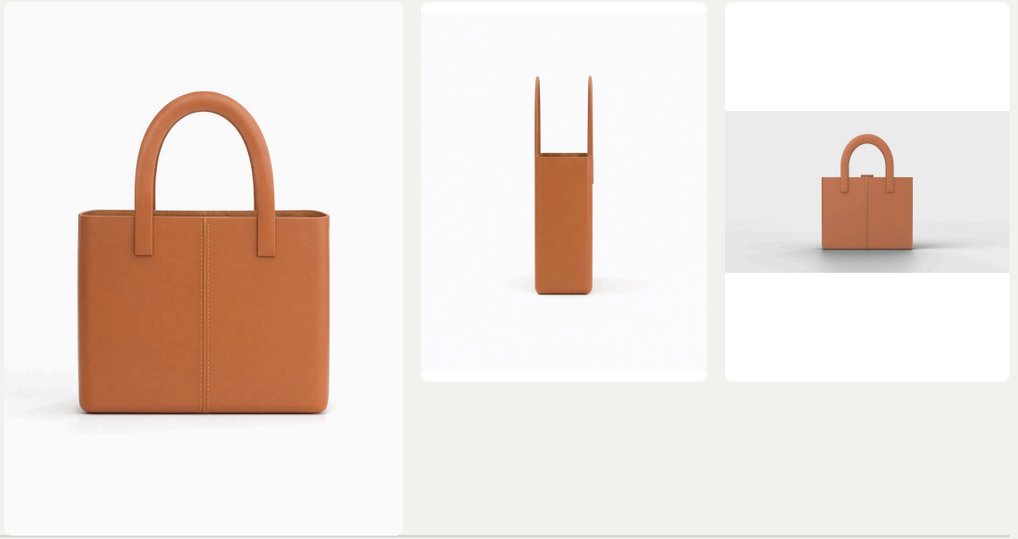

WIDTH	HEIGHT	DEPTH	LEATHER
28 cm	22 cm	10 cm	Cognac

03 · 3D

A 3D prototype checks the proportions.

From the product photo we rebuild a **3D model** with TRELLIS.2, Hunyuan3D 2.1 and SAM 3D, and the team keeps the best one. The mesh fixes the true size, so the bag keeps its 28 × 22 × 10 cm proportions in every photo and video that follows.

TRELLIS.2 · Hunyuan3D 2.1 · SAM 3D

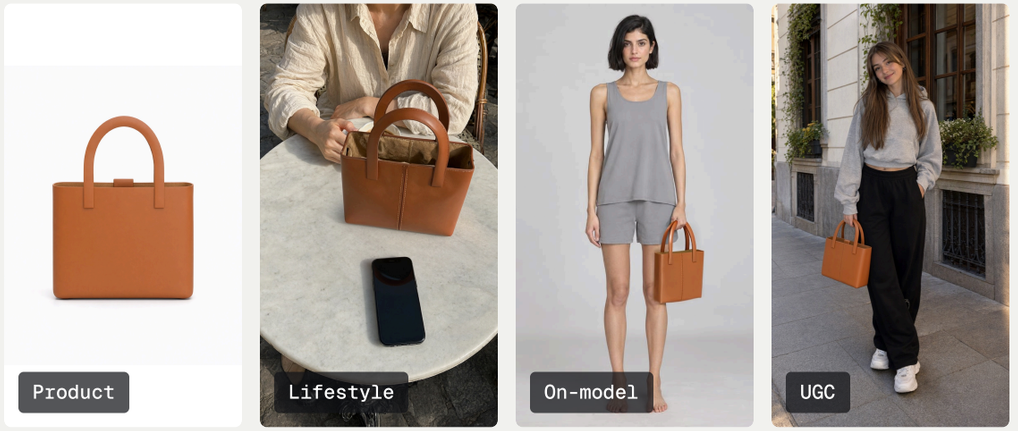

04 · Content

Everything a launch needs, ready for social.

Product shots, a lifestyle scene, on-model photos, editorials, reels with virtual creators and the product page. The **same bag in every frame**.

All the content for the Cabas took **about 40 minutes of compute and $5**.

Product views · Lifestyle · On-model · UGC reels

05 · Test

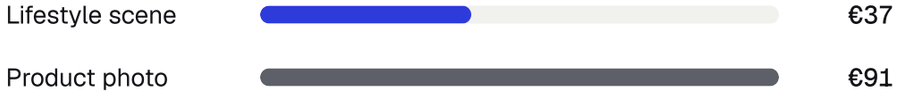

Real audiences, before production.

Approved content becomes a **social campaign** on Instagram, TikTok and Pinterest in four countries, pointing to a **pre-order page**.

Each asset is measured. The lifestyle scene brings a pre-order for **€37**, less than half the product photo.

REACH	PRE-ORDERS	BUDGET · 10 DAYS
234k	40	€2,500

COST PER PRE-ORDER, BY ASSET

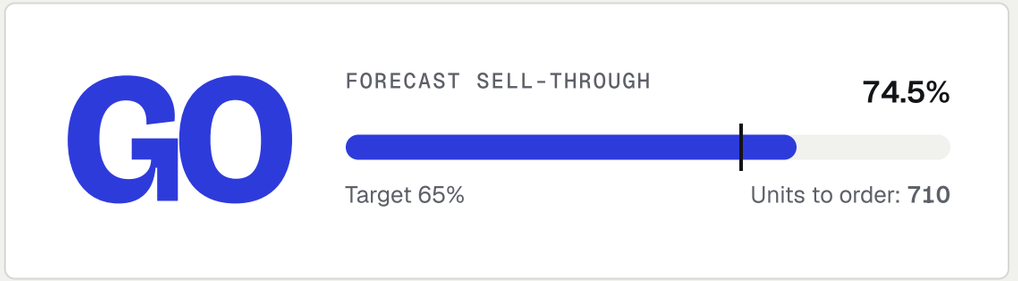

In the demo, audience response is simulated from the brand's past launches.

06 · Decide

Statistics make the call, not generative AI.

The forecast compares this test with the brand's past launches using classical statistics, so the order quantity can be explained line by line.

07 · Iterate

Customers rewrite the product.

Gemma 4, Google's open model, running on AMD GPUs through **AMD Token Factory**, reads the test results and the comments in four languages and turns them into changes to the design, the content and the order.

One click writes the change into the DNA, and the next round starts corrected.

At the end, **Evolus AI** condenses the verdict, forecast, comments, actions and risks into three bullets management can read in a minute.

Gemma 4 · AMD Token Factory · Evolus AI · summarize

IT	Bellissima, ma senza tracolla non la porto in ufficio.
FR	Il manque une bandoulière, sinon je la prends.
DE	Gibt es eine Innentasche mit Reißverschluss?

Example comments, written for this page.

SUMMARY FOR MANAGEMENT · EVOLUS AI

- 10-day test of the Cognac Cabas: €2,500 budget, 234,000 people reached, 40 pre-orders.
- The lifestyle scene brought a pre-order at €37, against €91 for the product photo. Forecast sell-through 74.5% against a 65% target.
- GO: order 710 units. 15% of comments ask for a crossbody strap, others a zip pocket.

IMPACT

Stop a flop before you pay for it.

−98%

capital at risk before knowing whether the product sells.

PER PRODUCT	TODAY	WITH SARTORIA
First market signal	~~26 weeks~~	10 days
Spent before knowing if it sells	~~€163,850~~	€2,505
Samples and photo shoot	~~€7,850~~	$5 of compute

BUILT ON OPEN MODELS

Open weights, trained on the brand.

Trainable

A LoRA teaches Qwen Image the maison's style. Closed image models can't be fine-tuned like that.

Private

Image models run on our own GPUs, so sketches and unreleased collections never reach a third party.

Swappable

When a better 3D model ships, we plug it in without touching the rest of the pipeline.

ALIBABA

Qwen Image 2.1 + LoRA

Draws the product, views, scenes and reel frames in the brand's style.

MICROSOFT · MIT

TRELLIS.2

Rebuilds the 3D model from a photo. Default choice.

TENCENT

Hunyuan3D 2.1

Alternative 3D reconstruction, often with better textures.

META

SAM 3D

Alternative 3D reconstruction from a single photo.

GOOGLE · ON AMD

Gemma 4

Reads the market test and comments, proposes changes. Next: reviews the 3D model against the sketch.

SERVICE

Evolus AI

Reads the corporate identity document, scans included, and summarises the market analysis at the end.

SARTORIA

Produce only what the market has already chosen.

Ten days instead of six months. Less than 2% of the capital at risk.
